

$$3 + 3 = 6$$

SUM

TIME

## SUM TIME

### Contents:

15 cards with counting exercises and sums  
number tiles  
Instructions

SUM TIME offers counting and arithmetic exercises that make it easy to learn to count to 25.

### Before you begin:

The number and symbol tiles are in numerical order on the number and symbol card in the case; the symbols at the end. For each number and symbol, there are tiles in four different colours. The colours were chosen to make the game more attractive. They do not help in any way to solve the problems.

If you turn over a tile, you can see that a special system was devised for the game. We call it coding.

Each tile has a different code. Only the right number or symbol will fit!

Make sure you place the tiles on the same line as the exercise, in other words next to it.

The 15 cards are arranged in a certain order. The first four cards contain counting exercises. The remaining cards are arranged in order of increasing difficulty up to card 15, which teaches how to multiply by two.

Select the card you want to play with and place it on the yellow section. In the meantime, you can place the other cards in the space provided below.

### HOW TO PLAY

Below is a short description of the exercises.

### COUNTING

card 1 - The Elephant

card 2 - The Giraffe

These two cards contain only counting exercises. Place the correct answer next to the exercise.

card 3 - The Snake

card 4 - The Ostrich

These two cards contain the first arithmetic exercises - adding and subtracting.

### EXERCISES

Card 5 - Underwater

Three addition sums.

Now try to create your own sums with the numbers and symbols.

### Card 6 - Bird nests

Three subtraction (take-away) sums.

### Card 7 - Strange animals

Count the teeth, flies and shoes and show how many there are altogether.

### Card 8 - The Night

Counting exercises - up to 25.

### Card 9 - At the bottom of the Sea

### Card 10 - Monsters on Mars

Use your counting, adding and subtracting skills to complete these exercises and fill in the gaps. An intermediary step before you actually begin adding and subtracting just with numbers.

### Card 11 - Seals

Juggling with balls that contain exercises.

### Card 12 - The Monkey

The monkey is balancing all of the chests. Place the right answers in the boxes.

### Card 13 - The Tiger

A mixture of adding and subtracting sums. Each ring contains a separate sum. Place the correct answer in the boxes.

### Card 14 - The Ladybirds

More adding and subtracting sums. The ladybirds look alike - look closely and see if you can find the differences.

### Card 15 - The Beavers

This card offers an introduction to multiplication. It teaches the two times table.
